Smart Delivery - Automatic Urgent Route Selection

Main
StrategySelector
RoutePlanner
FastestRouteStrategy
RouteConstraintChecker
RouteMetricsCalculator

Strategies are registered before the automatic selection loop.
This iteration uses a request with priority URGENT.

selectStrategy(automaticRequest)
fastestStrategy
setStrategy(fastestStrategy)
plan(routes, automaticRequest)
selectRoute(routes, automaticRequest)
filterRoutes(routes, automaticRequest)

loop [each route]
getRejectionReasons(route, automaticRequest)
calculateCost(route, automaticRequest)
total cost
calculateTime(route)
total time

suitableRoutes

loop [each suitable route]
calculateTime(route)
total time

loop [each original route]
getRejectionReasons(route, automaticRequest)
rejection reasons

calculateTime(selectedRoute)
total time
calculateCost(selectedRoute, automaticRequest)
total cost

RouteDecision
RouteDecision
getStrategyName()
getStrategyName()
Fastest Strategy
Fastest Strategy
print explanation and rejection reasons
